

Vcom3D Announces American Sign Language Learning Application to Apple App Store

ORLANDO, FL., September 9, 2008 -- Vcom3D's successful line of sign language software, Sign Smith, has gone mobile. "Sign Smith ASL" combines our patented SigningAvatar® Technology with our knowledge of American Sign Language. Developed by our ASL Team which is comprised of 4 Deaf professionals, the Sign Smith ASL apps give the user what they need to learn as little or as much ASL as they want!

Sign Smith ASL Ultimate is for the person who is serious about learning ASL. For \$29.99, you can learn 1,200 signs from many different learning categories. Sign Smith ASL Essential is for the person who is interested in learning the basics. For just \$1.99, it contains 100 signs including the ASL Alphabet, numbers, emotions, greetings, and days of the week. Sign Smith ASL LITE is a free app of about 20 sample signs..

"Combining the innovative technology behind the iPhone and iPod Touch with Vcom3D's award winning language and culture products provides everyone the opportunity to learn and practice, anytime, anywhere," said Vcom3D CEO Carol Wideman. "ASL is a beautifully visual language that is rich in culture. Vcom3D has had much success with the Deaf community because of our continued research into how to help them learn as children and become successful working adults when they transition from college to the working world. Providing an easy way for more people to learn ASL only strengthens our sense of community spirit and acceptance."

Vcom3D's Sign Smith Studio sign language authoring tool was used to create the videos in this app. Look for more sign language apps from Vcom3D soon. We welcome feedback (customerservice@vcom3d.com) regarding mobile apps that our customers would find most useful.

Founded in 1997, Orlando-based Vcom3D, Inc. is revolutionizing education, accessibility, training and communication. The company has established itself as a leader in providing improved learning outcomes that include its multi-lingual, culturally-appropriate, life like characters. Learning is delivered on desktop and mobile devices. For more information, please visit www.Vcom3D.com.
